Notes on usage

- The heat resistance value of 90°C has been evaluated in-house by Takemoto.
- Heat resistant temperature and chemical resistance of the bottle may vary depending on the conditions of use. Please be sure to conduct a filling trial before use and consider all requirements and setting of expiration dates.
- Thermal expansion of the contents should be considered when setting filling capacity.
- Depending on the characteristics of the contents and the storage environment after filling, decompression of the bottle may occur.

Shrink film / label application

You can change the product image by decorating all or part of the surface with shrink film or a label
